

UI Automation Test Documentation

Test Case 1: Duplicate Product Validation

Scenario

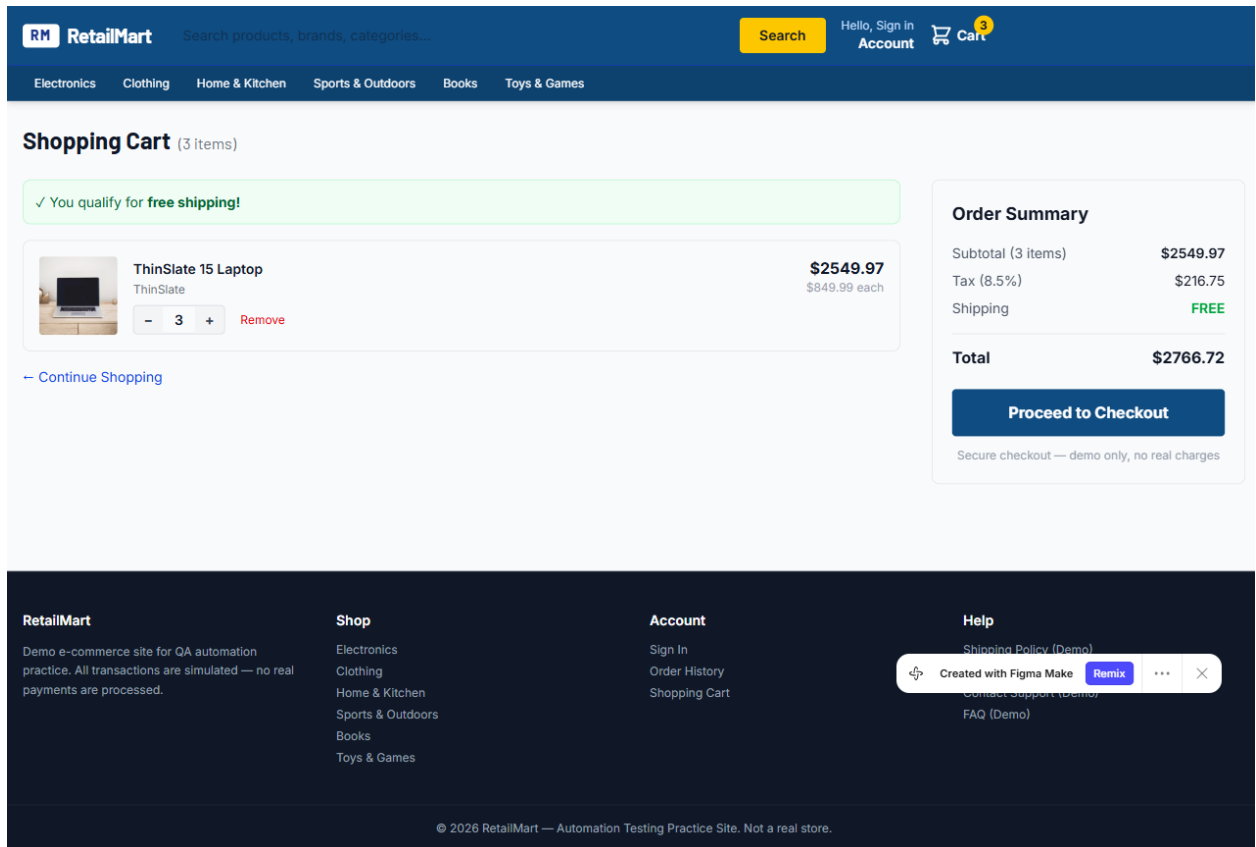

Verify that adding the same product multiple times updates the quantity instead of creating duplicate cart entries.

Steps

1. Open the application.
2. Click **Shop Now**.
3. Navigate to the **Electronics** category.
4. Select the **ThinSlate 15 Laptop**.
5. Add the laptop to the cart twice.
6. Open the shopping cart.

Expected Result

- The quantity increases instead of creating duplicate product entries.
- The product total is updated based on the new quantity.
- The cart badge count is updated correctly.
- The order summary (subtotal and total) reflects the updated quantity.

Test Case 2: Payment Failure Validation

Scenario

Verify that the application handles a declined payment correctly.

Steps

1. Add a product to the cart.
2. Proceed to Checkout.
3. Enter valid customer/shipping details.
4. Continue to the Payment page.
5. Select **Payment Failure**.
6. Enter the declined card number **4000 0000 0000 0002**.
7. Enter a valid expiry date and CVV.
8. Click **Place Order**.

Expected Result

- The payment is declined.
- An appropriate payment failure message is displayed.
- The user remains on the Payment page.
- Previously entered shipping information is retained.
- No order is created.
